

PROPOSAL FOR NC HVDC REQUIREMENTS OF GENERAL APPLICATION

Public consultation 15 March – 23 April 2018

TABLE OF CONTENTS

| Introduction | <u>6</u> 6 |
|---|---|
| 1. Scope of application | <u>8</u> 8 |
| 2. TITLE II: General Requirements for HVDC connections | <u>9</u> 9 |
| 2.1. Chapter 1:Requirements for active power control and frequency support | <u>9</u> 9 |
| 2.1.1. Article 11: Frequency ranges | <u>9</u> 9 |
| 2.1.1.1. Frequency Ranges §11.1 | <u>9</u> 9 |
| 2.1.1.2. Wider frequency Ranges §11.2 | |
| 2.1.1.3. Automatic disconnection §11.3 | <u>9</u> 9 |
| 2.1.1.4. Maximum admissible power output §11.4 | |
| 2.1.2. Article 13: Active power controllability, control range and ramping rate | |
| 2.1.2.1. Active power controllability §13.1(a)i | |
| 2.1.2.2. Active power controllability §13.1(a)ii | |
| 2.1.2.3. Active power controllability §13.1(a)iii | <u>10</u> 10 |
| 2.1.2.4. Active power controllability §13.1(b) | |
| 2.1.2.5. Fast active power reversal §13.1(c) 2.1.2.6. Automatic remedial actions §13.3 | <u>1010</u> |
| 2.1.3. Article 14: Synthetic inertia | 1010 |
| 2.1.3.1. Synthetic inertia §14.1 | |
| 2.1.3.2. Synthetic inertia §14.2 | 1010 |
| 2.1.4. Annex II: Requirements applying to frequency sensitive mode, limited free | |
| sensitive mode overfrequency and limited frequency sensitive mode, immed nee | |
| 2.1.4.1. Frequency Sensitive mode Annex II A1(a) | |
| 2.1.4.2. Frequency Sensitive mode Annex II A1(d)(ii) | |
| | 11111 |
| | |
| 2.1.4.3. LFSM-O Annex II B1(c) | <u>11</u> 11 |
| | <u>11</u> 11 <u>11</u> 11 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 | <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) | <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 | <u>11</u> 11 <u>11</u> 11 <u>11</u> 11 <u>11</u> <u>11</u> <u>11</u> <u>11</u> |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 2.1.5.2. Frequency control mode §16.2 | <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 2.1.5.2. Frequency control mode §16.2 2.1.6. Article 17: Maximum loss of active power | <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 2.1.5.2. Frequency control mode §16.2 2.1.6. Article 17: Maximum loss of active power 2.1.6.1. Maximum loss of active power §17.1 | <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 2.1.5.2. Frequency control mode §16.2 2.1.6. Article 17: Maximum loss of active power 2.1.6.1. Maximum loss of active power §17.1 2.2. Chapter 2: Requirements for reactive power control and voltage support | <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 2.1.5.2. Frequency control mode §16.2 2.1.6. Article 17: Maximum loss of active power 2.1.6.1. Maximum loss of active power §17.1 2.2. Chapter 2: Requirements for reactive power control and voltage support 2.2.1. Article 18: Voltage ranges | <u>11</u> 44 <u>11</u> 44 |
| 2.1.4.3. LFSM-O Annex II B1(c) 2.1.4.4. LFSM-O Annex II B2 2.1.4.5. LFSM-U Annex II C1(c) 2.1.4.6. LFSM-U Annex II C2 2.1.5. Article 16: Frequency control 2.1.5.1. Frequency control mode §16.1 2.1.5.2. Frequency control mode §16.2 2.1.6. Article 17: Maximum loss of active power 2.1.6.1. Maximum loss of active power §17.1 2.2. Chapter 2: Requirements for reactive power control and voltage support 2.2.1.1. Voltage ranges 2.2.1.1. Voltage ranges Annex III Table 4 | <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> <u>1144</u> |

Proposal General Requirements HVDC

INTRODUCTION

Scope of this document

Article 5(4) of the NC HVDC [1] states that the relevant system operator or TSO submits a proposal for requirements of general application (or the methodology used to calculate or establish them), for approval by the competent entity, within two years of entry into force of the NC HVDC, i.e. 28 September 2018. A similar requirement is included in the two other connection Network Codes, namely in Art. 7(4) of the NC RfG [2] and in Art. 6(4) of the NC DCC [3].

The aim of this document is to synthetize the technical proposal of the TSO regarding the Belgian implementation of the non-exhaustive requirements stated in the NC HVDC. This document is the final version of the proposal for requirements of general application (hereafter named as 'general requirements'), in accordance with Art. 5(4) of the NC HVDC.

On 17 May 2018, Elia will submit the general requirements proposals for NC RfG, but also for NC DCC and NC HVDC to the competent authority (because this is the deadline for the submission of the general requirements NC RfG and the decision has been taken to submit the general requirements for the three codes together) together with the (track change) proposal of an amended Federal Grid Code [4] (and a formal proposal on maximum capacity thresholds of type B, C and D power-generating modules (PGM)). Elia will organize beforehand a public consultation for all deliverables in March-April 2018 (except for the public consultation on the maximum capacity thresholds B, C and D, that already took place from 19 May till 20 June 2017). This approach is in line with the vision of the Belgian Federal Administration (FOD/SPF Energy) [5].

This document should be considered as a technical and not legally binding document, focusing on the clarification of various technical general requirements that will be reflected in various grid codes, contract, terms and conditions, regulatory documents and or technical prescriptions.

The document follows the same logic as in the NC HVDC: the proposal is organized per technical topic and per category. As such the NC HVDC provides for requirements for HVDC connections and for DC-connected power park modules and remote-end HVDC converter stations.

The scope of this document contains especially, but is not limited to, the implementation proposal of the non-exhaustive requirements in the NC HVDC. To increase its readability, this document might also contain NC exhaustive requirements, implementation proposal of non-exhaustive requirements of the other connection NC, or other specific national/regional requirements for information purposes only, but certainly does not cover all of them. Furthermore, some non-exhaustive requirements foreseen in the HVDC NC are sitespecific (and not general). A reference to those site-specific requirements is also included in this document. Some site-specific requirements require an agreement between the relevant system operator, the TSO and the owner of the unit in question. In such case, Article 5(5) of the NC HVDC shall apply, which foresees that the relevant parties shall then endeavor to seek an agreement within six months after a first proposal has been submitted by one party

Public consultation

Proposal General Requirements HVDC

to the other parties. Site-specific requirements might, e.g., be taken up in a connection agreement.

For which regards the complete list of non-exhaustive requirements to be proposed as general requirements, Elia is taking as reference the ENTSO-e guidance document on 'Parameter of Non-exhaustive requirements' [6]. This document does not only mention the parameters to be defined per topic, but also sometimes which article of each connection NC should be considered as non-exhaustive and who should be seen as relevant system operator to define an implementation proposal. In theory, both the TSO and (C)DSOs can be considered as 'relevant system operator', depending on the requirement. In practice, however, HVDC systems will in Belgium currently be connected to the TSO-grid. Hence, when a reference is made in this document (or in the NC HVDC) to the relevant system operator, this will in the current situation be the TSO, i.e. Elia.

Current HVDC knowledge and translation of this knowledge in general or sitespecific requirements

The current HVDC knowledge is limited:

- HVDC VSC converters: still experimental (limited European operational experience);
- Not yet any operational experience in Elia (NEMO: start foreseen in 2019);
- Academic & industrial research on DC-AC interactions still in early stages;
- Current proposals may not exclude future opportunities;
- International tendency to specify the least possible and gather experience.

This explains why the NC HVDC foresees a lot of site-specific requirements.

Public consultation

Proposal General Requirements HVDC

1. Scope of application

For the scope of application of the requirements of this document, please refer to Article 3 of the NC HVDC.

Figure 1 – The different HVDC applications as defined within the scope of application.

2. TITLE II: General Requirements for HVDC connections

2.1. Chapter 1:Requirements for active power control and frequency support

2.1.1. Article 11: Frequency ranges

2.1.1.1. Frequency Ranges §11.1

An HVDC system shall be capable of staying connected to the network and remaining operable within the following frequency ranges and time periods

- In the range from 47.0 Hz to 47.5 Hz for 60 seconds
- In the range from 47.5 Hz to 48.5 Hz for unlimited time
- In the range from 48.5 Hz to 49.0 Hz for unlimited time
- In the range from 49.0 Hz to 51.0 Hz for unlimited time
- In the range from 51.0 Hz to 51.5 Hz for unlimited time
- In the range from 51.5 Hz to 52.0 Hz for 30 minutes

2.1.1.2. Wider frequency Ranges §11.2

The definition of wider frequency ranges and longer minimum times for operation is site specific. It may be agreed between the TSO and HVDC system owner on a case by case basis.

2.1.1.3. Automatic disconnection §11.3

This requirement is site specific. It is to be specified by the TSO on a case by case basis.

2.1.1.4. Maximum admissible power output §11.4

In case of technical limitation, when operating at an AC system frequency below 49 Hz, the maximum admissible active power output reduction from its operating point shall not go beyond 2%/Hz.

2.1.2. Article 13: Active power controllability, control range and ramping rate

2.1.2.1. Active power controllability §13.1(a)i

The definition of a maximum and minimum power step size for adjusting the transmitted active power is site specific. It may be specified by the TSO on case by case basis.

2.1.2.2. Active power controllability §13.1(a)ii

The definition of a minimum active power transmission capacity for each direction, below which active power transmission capability is not requested, is site specific. It may be specified by the TSO on case by case basis.

Public consultation

Proposal General Requirements HVDC

Commented [A1]: The imposed durations are more stringent than the durations foreseen in the NC HVD

2.1.2.3. Active power controllability §13.1(a)iii

The definition of the maximum delay within which the HVDC system shall be capable of adjusting the transmitted active power is site specific. It is to be specified by the TSO on case by case basis.

2.1.2.4. Active power controllability §13.1(b)

The modalities according to which an HVDC system shall be capable of modifying the transmitted active power infeed in case of disturbances into one or more of the AC networks to which it is connected is site specific and shall be specified by the TSO on a case by case basis. If the initial delay prior to the start of the change is greater than 10 milliseconds from receiving the triggering signal sent by the relevant TSO, it shall be reasonably justified by the HVDC system owner to the relevant TSO.

2.1.2.5. Fast active power reversal §13.1(c)

HVDC systems shall be capable of fast active power reversal. Fast active power reversal shall be performed as fast as technically feasible but in less than 2 seconds.

2.1.2.6. Automatic remedial actions §13.3

The control functions of an HVDC system shall be capable of taking automatic remedial actions including, but not limited to, stopping the ramping and blocking FSM, LFSM-O, FFSM-U and frequency control.

Contingencies involving loss of generation or load may require Emergency Power Control (EPC), i.e. an automatic reduction or increase in the power transfer including possible power reversal. The System Owner shall design and supply a run-back (active power ramp-down) & run-up (active power ramp-up) control system that shall be able to activate in each station up to 10 distinct pre-programmed run-back cases and up to 10 run-up cases by external signals and each with a predefined setting for active power exchange [MW] and power ramp rate [MW/s] for the power setpoint change from the actual setting to the requested one. The Relevant System Operator or the Transmission System Operator must be able to trigger any of the 10 run-up and 10 run-back systems at any given instant.

The triggering and blocking criteria are site specific and shall be specified by the TSO on a case by case basis after notification to the CREG.

2.1.3. Article 14: Synthetic inertia

2.1.3.1. Synthetic inertia §14.1

This requirement is site specific. It is to be specified by the TSO on a case by case basis.

2.1.3.2. Synthetic inertia §14.2

This requirement is site specific. It is to be specified by the TSO on a case by case basis.

2.1.4. Annex II: Requirements applying to frequency sensitive mode, limited frequency sensitive mode overfrequency and limited frequency sensitive mode underfrequency

Public consultation

Proposal General Requirements HVDC

Commented [A2]: Is this feasible, for the convertor well as for the grid?

2.1.4.1. Frequency Sensitive mode Annex II A1(a)

This requirement is site specific. It is to be specified by the TSO on a case by case basis after notification to the CREG.

2.1.4.2. Frequency Sensitive mode Annex II A1(d)(ii)

This requirement is site specific. It is to be specified by the TSO on a case by case basis after notification to the CREG.

2.1.4.3. LFSM-O Annex II B1(c)

With regard to limited frequency sensitive mode - overfrequency (LSM-O), the HVDC system shall be capable of adjusting active power frequency response as fast as inherently technically feasible, with an initial delay as short as possible and time for full activation set at 2 seconds. This is subject to a notification to the CREG.

2.1.4.4. LFSM-O Annex II B2

The frequency threshold referred to in point (a) of paragraph 1 shall be adjustable between 50.2 Hz and 50.5 Hz and the minimum droop setting is 0.1% (the exact value will be set in connection contract). This is subject to a notification to the CREG.

2.1.4.5. LFSM-U Annex II C1(c)

The initial delay is the shortest time within technical feasible limits and with a possibility to implement an additional adjustable delay to be at full activation at 2 seconds. This is subject to a notification to the CREG.

2.1.4.6. LFSM-U Annex II C2

The frequency threshold referred to in point (a) of paragraph 1 shall be adjustable between 49.8 Hz and 49.5Hz and the minimum droop setting is 0.1% (the exact value will be set in connection contract). This is subject to a notification to the CREG.

2.1.5. Article 16: Frequency control

2.1.5.1. Frequency control mode §16.1

This is a site-specific requirement and can be specified by the TSO on a case by case basis.

2.1.5.2. Frequency control mode §16.2

The operating principle, the associated performance parameters and the activation criteria of this frequency control are site specific and shall be specified by the TSO on a case by case basis.

2.1.6. Article 17: Maximum loss of active power

2.1.6.1. Maximum loss of active power §17.1

This is a site-specific requirement and can be specified by the TSO on a case by case basis.

Public consultation

Proposal General Requirements HVDC

2.2.2.4. Short circuit contribution during faults §19.3

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis.

2.2.3. Article 20: Reactive power capability

2.2.3.1. Reactive power capability §20.1

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis.

2.2.3.2. Reactive power capability §20.3

An HVDC system shall be capable of moving to any operating point within its U-Q/Pmax profile in less than 100 ms.

2.2.4. Article 21: Reactive power exchanged with the network

2.2.4.1. Reactive power exchanged with the network §21.2

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis.

2.2.5. Article 22: Reactive power control mode

2.2.5.1. Reactive power control mode §22.1

An HVDC converter station shall be capable of operating in the following reactive power control modes:

(a) voltage control mode; (b)

reactive power control mode; (c)

power factor control mode.

2.2.5.2. Reactive power control mode §22.2

An HVDC converter station shall be capable of operating in the following additional control modes:

(a) voltage dependent reactive power control mode. The characteristics of this mode are subject of a mutual agreement between the relevant TSO and the HVDC system owner.

(b) STATCOM mode: all previously specified control modes must be available without exchange of active power in the situation with our without the connection of the DC cable or overhead line.

2.2.5.3. Reactive power control mode §22.3(b)

The set point deadband shall be adjustable in steps of 0.5%

2.2.5.4. Reactive power control mode §22.3(c)(i)

In voltage control mode following a voltage step change, an HVDC system is able to achieve 90% of the change of reactive power within maximum 100ms with disabled ramp rate limiter.

Public consultation

Proposal General Requirements HVDC

2.2.5.5. Reactive power control mode §22.3(c)(ii)

The HVDC system shall be equipped with a reactive power ramp rate limiter with <u>settles_sets</u> the controlled AC voltage within the range of 99% of the setpoint in a programmable time span ranging between 1s and 60s with steps of 0.1s.

2.2.5.6. Reactive power control mode §22.3(d)

The slope of the instructed reactive power component shall be online adjustable in the range of 1 to 50 Mvar/s in steps of 0.1 Mvar/s.

2.2.5.7. Reactive power control mode §22.4

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis.

2.2.5.8. Reactive power control mode §22.5

The maximum step size for reactive power is less than 1Mvar and for the voltage less than 1kV.

2.2.5.9. Reactive power control mode §22.6

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis.

2.2.6. Article 23: Priority to active or reactive power contribution

2.2.6.1. Priority to active or reactive power contribution §23

Reactive power contribution shall have priority during low or high voltage operation and during faults for which fault-ride-through capability is required, taking into account the capabilities of the HVDC system specified.

2.2.7. Article 24: Power Quality

2.2.7.1. Power quality §24

This non-exhaustive requirement related to power quality will be based on the relevant Synergrid regulations regarding power quality, unless more stringent requirements are set forth in the connection contract.

2.3. Chapter 3: Requirements for fault ride through capability

2.3.1. Article 25: Fault ride through capability

2.3.1.1. Fault ride through capability §25.1

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis. The terms and settings for automatic disconnection shall be agreed between RSO/TSO and HVDC system owner on a case by case basis.

The minimum requirement to stay connected is stated in the following table:

| Time [ms] | Voltage amplitude [pu] |
|-----------|------------------------|
| T<0 ms | 1.0 |

Public consultation

Proposal General Requirements HVDC

Gelia

2.3.1.2. Fault ride through capability §25.2

TSO shall only provide this if requested by HVDC system owner

2.3.1.3. Fault ride through capability §25.4

Time is to be agreed between TSO and HVDC system owner, but TSO specifies the voltage levels on a case by case basis.

2.3.1.4. Fault ride through capability §25.5

This requirement is subject of an agreement between the system owner and the RSO/TSO on a case by case basis.

2.3.1.5. Fault ride through capability §25.6

The fault-ride through capabilities for asymmetrical faults of an HVDC system shall be the following

- (a) The HVDC converter station shall be able to inject negative sequence currents. There shall be separate positive and negative sequence current controllers.
- (b) It shall be possible to continue active power injection up to the maximum possible value.
- (c) No second harmonic current shall be transferred to the converters' DC side
- (d) Automatic reclosure of AC overhead lines may not lead to the disconnection of the HVDC system.

2.3.2. Article 26: Post fault active power recovery

2.3.2.1. Post fault active power recovery §26

A HVDC system shall be able to recover active power transmission following fault clearance and reach the pre-fault set-points within maximum 200ms. The relevant TSO may set the recovery time and post-fault ramping rate in order to reach a slower recovery.

2.4. Chapter 4: Requirements for control

2.4.1. Article 28: Energisation and synchronisation of HVDC converter stations

2.4.1.1. Energisation and synchronisation of HVDC converter stations §28

During the energisation or synchronisation of an HVDC converter station to the AC network or during the connection of an energised HVDC converter station to an HVDC system, the HVDC converter station shall have the capability to limit any voltage changes to a steadystate level. That steady-state level and the maximum magnitude, duration and measurement

Public consultation

Proposal General Requirements HVDC

window of the voltage transients are site specific and are to be specified by the RSO/TSO on a case by case basis. The steady-state level shall not exceed 5 per cent of the pre-synchronisation voltage.

2.4.2. Article 29: Interaction between HVDC systems or other plants and equipment

2.4.2.1. Interaction between HVDC systems or other plants and equipment §29.2

This requirement is site-specific and is to be specified by the RSO/TSO on a case by case basis.

2.4.2.2. Interaction between HVDC systems or other plants and equipment §29.7

This requirement is site-specific and is to be specified by the RSO/TSO on a case by case basis.

2.4.3. Article 30: Power oscillation damping capability

2.4.3.1. Power oscillation damping capability §30

This requirement is site specific. It has to be agreed between the TSO and the HVDC system owner on a case by case basis.

2.4.4. Article 31: Subsynchronous torsional interaction damping capability

2.4.4.1. Subsynchronous torsional interaction damping capability §31.2

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

2.4.4.2. Subsynchronous torsional interaction damping capability §31.3

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

2.4.5. Article 32: Network characteristics

2.4.5.1. Network characteristics §32.1

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

2.4.6. Article 33: HVDC system robustness

2.4.6.1. HVDC system robustness §33.1

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

2.4.6.2. Network characteristics §33.2

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

De netbeheerder moet aantonen aan de bestaande netgebruikers dat bestaande en nieuwe installaties n geimpacteerd worden.

2.5. Chapter 5: Requirements for protection devices and settings

2.5.1. Article 34: Electrical protection schemes and settings

2.5.1.1. Electrical protection schemes and settings §34.1

Following elements will need to be provided for under HVDC connection contract: Any scheme considered suitable for the HVDC system to meet the functional requirements may be proposed by the system owner. The System Owner shall, with adequate explanatory descriptions, demonstrate that the proposed schemes meet the criteria of speed, dependability, security, sensitivity and maintainability requirements. The System Owner shall provide proof that the protection scheme is not a prototype and has been successfully used in other similar installations. The relevant TSO reserves the right to adapt the protection scheme in mutual agreement with the System Owner in order to coordinate with the protection system of the AC system at the PCC.

Protective relay settings shall be completed by the System Owner and provided to the relevant TSO for review at least 3 months before the Tests on Completion program commencement date. Setting development explanations and calculations shall be provided with the protective relay settings.

2.5.1.2. Electrical protection schemes and settings §34.3

Idem §34.1

2.5.2. Article 35: Priority ranking of protection and control

2.5.2.1. Priority ranking of protection and control §35.1

A control scheme, specified by the HVDC system owner consisting of different control modes, including the settings of the specific parameters, shall be coordinated and agreed between the relevant TSO, the relevant system operator and the HVDC system owner. The control scheme, its setting development explanations and calculations shall be provided to the relevant TSO for review at least 3 months before the Tests on Completion program commencement date.

2.5.2.2. Priority ranking of protection and control §35.2

This requirement is site specific. It has to be agreed between the TSO and the HVDC system owner on a case by case basis.

2.5.3. Article 36: Changes to protection and control schemes and settings

2.5.3.1. Changes to protection and control schemes and settings §36.1

The design of the HVDC converter shall permit modifying control characteristics, control loop responses, and protection settings etc. of the control and protection systems for the purpose of on-site optimization and when deemed required in the future using the engineering workstation. The System Owner shall provide a secure method of preventing inadvertent change to implemented functions

2.5.3.2. Changes to protection and control schemes and settings §36.2

This requirement is site specific. It has to be agreed between the TSO and the HVDC system owner on a case by case basis.

Public consultation

Proposal General Requirements HVDC

2.5.3.3. Changes to protection and control schemes and settings §36.3

This requirement is site specific. It has to be agreed between the TSO and the HVDC system owner on a case by case basis.

2.6. Chapter 6: Requirements for power system restoration

2.6.1. Article 37: Black start

2.6.1.1. Black start §37.1

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

2.6.1.2. Black start §37.2

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

2.6.1.3. Black start §37.3

This requirement is site specific and needs to be specified by the TSO on a case by case basis.

3. TITLE III: Requirements for DC-connected power park modules and remote-end HVDC converter stations

3.1. Chapter 1: Requirements for DC-connected power park modules

3.1.1. Article 39: Frequency stability requirements

3.1.1.1. Frequency stability requirements §39.1

The requirement for DC-connected power park modules connected via HVDC systems which connect more than one control area to be capable of delivering coordinated frequency control is site specific and shall be specified by the TSO on a case by case basis.

3.1.1.2. Frequency ranges §39.2(a)

A nominal frequency other than 50 Hz or a frequency variable by design can be used, subject to agreement to TSO. In that case, the applicable frequency ranges and time periods shall be specified by the TSO on a case by case basis.

3.1.1.3. Wider frequency ranges §39.2(b)

The definition of wider frequency ranges and longer minimum times for operation is site specific. It may be agreed between TSO and DC-connected power park module owner on a case by case level to ensure the best use of the technical capabilities of a DC-connected power park module if needed to preserve or restore system security.

Public consultation

Proposal General Requirements HVDC

3.1.1.4. Automatic disconnection §39.2(c)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.1.5. LFSM-O §39.4

The same requirements of the RfD Type D will be applied

3.1.1.6. Constant power §39.5

The same requirements of the RfD Type D will be applied

3.1.1.7. Active power controllability §39.6

The same requirements of the RfD Type D will be applied

3.1.1.8. LFSM-U §39.7

The same requirements of the RfD Type D will be applied

3.1.1.9. FSM with subject to a fast signal response §39.8 The same requirements of the RfD Type D will be applied

3.1.1.10. Frequency restoration §39.9

The same requirements of the RfD Type D will be applied

3.1.1.11. Frequencies other than 50Hz §39.10

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.2. Article 40: Reactive power and voltage requirements

3.1.2.1. Voltage ranges Annex VII Table 9 and 10

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.2.2. Agreement on wider voltage ranges or longer minimum times §40.1(b)

The definition of wider voltage ranges and longer minimum times for operation is site specific. It can be agreed between RSO/TSO and HVDC system owner on a case by case level.

3.1.2.3. Automatic disconnection §40.1(c)

This requirement is site specific. It is to be specified by the RSO/TSO on a case by case basis. The terms and settings for automatic disconnection shall be agreed between the relevant system operator, the TSO and DC-connected power park module owner.

3.1.2.4. Voltage ranges for other AC voltages §40.1(d)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.2.5. Agreement how to meet reactive power requirements §40.1(e)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.2.6. Reactive power capability §40.2(b)(i)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

Public consultation

Proposal General Requirements HVDC

3.1.2.7. Reactive power capability §40.2(b)(ii)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.2.8. Priority to active and reactive power contribution §40.3

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.3. Article 41: Control requirements

3.1.3.1. Synchronisation §41.1

During the energisation or synchronisation of a DCC-connected power park module to the AC network , the DCC-connected power park module shall have the capability to limit any voltage changes to a steady-state level. That steady-state level and the maximum magnitude, duration and measurement window of the voltage transients are site specific and are to be specified by the TSO on a case by case basis (eg in connection contract). The steady-state level shall not exceed 5 per cent of the pre-synchronisation voltage.

3.1.3.2. Output signals §41.2

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.4. Article 42: Network characteristics

3.1.4.1. Method of pre-fault and post-fault conditions §42(a)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.4.2. Equivalents representing the collection grid §42(c)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.1.5. Article 43: Protection requirements

3.1.5.1. Electrical protection schemes §43.1

This requirement will be specified based on article 14.5 of RfG NC.

3.1.6. Article 44: Power quality

3.1.6.1. Power quality §44

This non-exhaustive requirement related to power quality will be based on n the relevant Synergrid regulations regarding power quality, unless more stringent requirements are set forth in the connection contract.

3.2. Chapter 2: Requirements for remote-end HVDC converter stations

3.2.1. Article 47: Frequency stability requirements

3.2.1.1. Frequency ranges §47.1

This requirement is site specific. It may be specified by the TSO on a case by case basis.

Public consultation

Proposal General Requirements HVDC

20/25

Commented [A10]: Why not IEC

3.2.1.2. Frequency ranges §47.2

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.2.2. Article 48: Reactive power and voltage requirements

3.2.2.1. Reactive power and voltage ranges Annex VIII Table 12 and 13

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.2.2.2. Agreement on wider voltage ranges or longer minimum times §48.1(b)

The definition of wider voltage ranges and longer minimum times for operation is site specific. It can be agreed between RSO/TSO and DC-connected power park module owner on a case by case level.

3.2.2.3. Voltage ranges for other AC voltages §48.1(c)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.2.2.4. Reactive power provision §48.2(a)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.2.2.5. U-Q/Pmax - profile §48.2(a)

This requirement is site specific. It may be specified by the TSO on a case by case basis.

3.2.3. Article 50: Power quality

3.2.3.1. Power quality §50

This non-exhaustive requirement related to power quality will be based on the relevant Synergrid regulations regarding power quality, unless more stringent requirements are set forth in the connection contract.

Commented [A11]: In overeenstemming met de PPI eigenaars. Synergrid heeft geen specificaties omtrent subharmo distortions.

4. TITLE IV: Information Exchange and Coordination

4.1.1. Article 51: Operation of HVDC systems

4.1.1.1. Operation of HVDC systems §51.1

The automatic controller hierarchy is site specific. It will be specified by the TSO on a case by case basis.

4.1.1.2. Operation of HVDC systems §51.4

This requirement is site specific. It may be specified by the TSO on a case by case basis.

4.1.2. Article 52: Parameters and settings

This requirement is subject of a mutual agreement between the relevant TSO and the HVDC system owner on a case by case basis.

4.1.3. Article 53: Fault recording and monitoring

4.1.3.1. Fault recording and monitoring §53.2 to 53.5

This requirement is site specific. It may be specified by the TSO on a case by case basis.

4.1.4. Article 54: Simulation models

4.1.4.1. Simulation models §54.1

The stipulated simulation models always need to be provided to the RST/TSO. The format is subject of a mutual agreement between the relevant TSO and the HVDC system owner on a case by case basis.
